INSIDE FLAP

She fits the way you already work

- **Your file structure.** Zhēn matches your existing folders and works from your files where they live — nothing copied, nothing filed twice. She asks before adding a folder.
- **Your templates.** She customizes herself to your business practice — your forms, logo and colors, and the way each person on your team works.
- **Everyone, their own view.** Subcontractors, owners and the Government sign in on any phone, tablet or laptop and see only their part.
- **One badge, one scan.** A safety orientation built from this job, then a project badge printed on site with each person's own QR sign-in.
- **CMMC-ready by design.** Works with Anthropic's AI for government, authorized at FedRAMP High and DoD IL4/5 in AWS GovCloud; your project stays on your own server.

Zhēn drafts. The person with the authority checks and signs. Nothing goes out without approval.

Precision Construction Services, LLC

SERVICE-DISABLED VETERAN-OWNED

Scan to meet Zhēn

Watch what she can do — any phone, no sign-in

Built by a QC Manager

James P. Franks, CCM, CQM-C — 28 years in construction management, 18 on federal contracts, Marine Corps veteran. Zhēn carries what the field taught him to every job at once.

PATENT PENDING

Zhēn™

The Quality Control Systems Guardian

CMMC-READY BY DESIGN

Works inside your CMMC Level 2 boundary — on Anthropic's AI for government, authorized at FedRAMP High and DoD IL4/5 in AWS GovCloud.

Construction QC just got a guardian.

Every requirement registered. Every record true.

Zhēn Federal **Zhēn Private**

Preparing for testing on real job sites

1 BEFORE THE JOB

She reads all of it — before anyone builds.

Constructability review before the bid

The solicitation, specs and drawings read together: missing sections, bad callouts, code conflicts, sequencing. Questions become RFIs before the bid, not change orders after award.

The job's paperwork, built

Submittal register, testing plan and Test Map, three-phase plan and hold points, QC Plan, safety plan and AHAs.

Every required test, counted

From her own quantity takeoff: a 1,000 sf slab at one test per 100 sf becomes tests 1 to 10, numbered in the log and placed on the plans.

A Blue Folder for every feature

One live book per definable feature of work — spec sections highlighted, approved submittals, Preparatory and Initial meetings, every test with photos.

Ties schedule and cost to the field

Daily progress, fragnets, time-impact drafts, changes and pay estimates come straight from the field record.

2 EVERY DAY

One day. Three reports. One record.

The Superintendent, QC Manager and Safety Officer each write their part. Snap the test ticket and the record fills itself; signed by the right people, in the Government's format.

Every QC item, on the schedule

Runs the meeting

Agenda from the live job, live captions, minutes drafted the moment it closes — each person confirms their part. Toolbox talks too.

Ask her out loud — like Siri

YOU
"Zhēn, find me all the emails about the elevator controller."

ZHĒN
Here are 6 — the latest is the ship date. I've opened them in the Project Inbox.

YOU
"Bring up the approved submittal for 07 84 00."

3 ACROSS THE COMPANY

She thinks like a senior construction manager.

Leads with the answer, cites the governing document, and flags anything that would bounce at review.

Project Inbox

Her view of your Outlook, sorted by issue. Your inbox does not change; she drafts, you send.

Change requests

Researches every record and writes the PM's position — a defense, a compromise, a way forward.

Takes over a running job

Up to date and under control in 30 days, with a Success Guide for every position.

Training that keeps morale up

A private 12-month program for every person; progress goes to them first.

Nothing lost

The junk scanner reads a ticket, receipt or sticky note and files it. Optional GPS units watch the equipment.

Why "Zhēn"

真 *zhēn* means "true." Her name also honors **Shi Yang** (c. 1775–1844), remembered as Zheng Yi Sao, who commanded one of history's largest fleets under a **written code**: orders followed, every haul recorded and shared by rule, the same rules for everyone. Zhēn keeps that kind of record — written down, checked, the same for all.

Zhēn Federal — QC for NAVFAC, USACE and GSA work. **Zhēn Private** — site control for commercial, residential and industrial builders.
